

**Docket #:** S90-102

# **Rat Antibodies (TR310; R1-2; 6C3)**

These cell lines include monoclonal antibodies for research purposes.

Rat Antibodies (TR310; R1-2; 6C3)

TR301: Specificity - Reacts with Vb 7 TCR bearing T cells. May be deleted in mouse strains expressing the Mls-1 phenotype.

R1-2: Specificity - Reacts with the 160kD  $\alpha$ 4 chain of the mouse lymphocyte surface receptor (LPAM-1) for Peyer's patch high endothelial venule determinants. This receptor appears to be required for lymphocyte homing into Peyer's Patches in vivo.

6C3: Specificity - reacts with the 6C3/BP-1 antigen found on pre-B and early B cells.

## **Applications**

- flow cytometry

## **Innovators**

- Irving Weissman
- Bernhard Holzmann
- Craig Okada
- Eric Pillemer
- Cheryl Whitlock

## **Licensing Contact**

**Michael Bellas**
