

Docket #: S01-094

Coupling of Excitation and Neurogenesis in Neural Stem/Progenitor Cells

Applications

- Potential therapies for patients with neurological and psychiatric disorders
- Screening methods to identify compounds that induce neurogenesis in culture models
- In vitro screening methods to identify compounds that act directly on excitation sensors or that influence downstream markers

Advantages

- Promotes formation of neurons, and synapse formation in addition to the other influences exerted by typical differentiation medium
- Patient-specific
